Summary

Full-stack Software Engineer with 2+ years of production experience at Infosys building data pipelines, REST APIs, and microservices on Kubernetes, backed by an M.S. in Information Systems (GPA 3.9). Builds complete systems end to end — from data ingestion and backend APIs to React frontends.

Technical Skills

Programming Languages	Python, Java, JavaScript, TypeScript, SQL
Frontend	React.js, HTML, CSS, Tailwind CSS
Backend	Node.js, Express.js, Spring Boot, Flask, REST APIs, Microservices, JWT, RBAC
Databases	PostgreSQL, Supabase, MongoDB Atlas
Data & ML	Apache NiFi, ETL Pipelines, Pandas, OpenAI API, LLMs, Prompt Engineering, Generative AI
Cloud & DevOps	AWS, Docker, Kubernetes, CI/CD, Git, Agile

Work Experience

Infosys Limited

Systems Engineer

Chennai, India

Sep 2021 – Dec 2023

- Worked on an AI-powered insurance document extraction platform, analyzing documents across **3** different lines of business and configuring extraction fields, classification rules, and carrier-specific document patterns.
- Developed Python and pandas-based post-processing logic to transform extracted JSON data, apply business rules/calculations, and generate client-ready Excel outputs, reducing manual data preparation effort by up to **80–90%**.
- Built and supported Apache NiFi automation pipelines integrated with extraction/classification APIs and Flask services running in Kubernetes to validate files, process documents end-to-end, and improve document-processing throughput by approximately **30%**.

Projects

TrendyTreasures — E-Commerce Microservices Platform *Node.js, Flask, React, MongoDB, JWT, Stripe, Docker*
[Live App](#) | [Admin Portal](#) | [GitHub](#)

- Built an e-commerce platform from seven independent services (Node.js/Express and Python/Flask) behind one Node.js API Gateway, deployed on Vercel/Render with a separate MongoDB Atlas database per service.
- Designed the API Gateway to securely pass signed (RS256) JWT tokens between services and refresh them automatically, removing extra database lookups on every request.
- Integrated third-party APIs — Stripe checkout with server-side price checks to prevent payment tampering, plus OpenAI-powered price suggestions and automatic email alerts when prices drop.

Auth Shield — Authentication & API Credential Service *Node.js, Express, JWT, RS256, bcrypt, MongoDB, Jest*
[Live App](#) | [GitHub](#)

- Built an OAuth-style login and API-credential service with a full sign-up and consent flow, securely hashed secrets (bcrypt), and automatic removal of secrets from every API response.
- Used RS256 asymmetric signing (the gateway keeps the private key; Auth keeps only the public key) and instant token revocation to protect against forged or replayed tokens.
- Secured all endpoints with double-submit CSRF protection, rate limiting, and session invalidation; added request logging to simplify debugging and troubleshooting, validated by a Jest + Supertest suite.

NorthLedger — Personal Finance Backend *Java, Spring Boot, Spring Security, JWT, PostgreSQL, JPA, Docker*
[GitHub](#)

- Built a secure personal-finance backend in Java and Spring Boot with JWT login, refresh tokens, and role-based access so each user can only see their own data.
- Designed REST APIs (documented with OpenAPI/Swagger) for accounts, transactions, categories, budgets, and recurring expenses on a normalized PostgreSQL schema using Spring Data JPA.
- Built credit, debit, and transfer workflows with automatic balance updates and insufficient-funds checks, plus monthly dashboards driven by data aggregation across income, expenses, savings, top categories, and budget progress.

Education

Northeastern University

Master of Science in Information Systems — GPA: **3.9/4.0**

Toronto, ON

Jan 2024 – Dec 2025

Jawaharlal Nehru Technological University

Bachelor of Technology in Computer Science & Engineering

India

Jul 2017 – Jul 2021
