Summary

Java Developer with hands-on experience across the full SDLC, building applications using Spring Boot, Java 8, REST APIs, and Microservices with Angular 8+ frontends. Experienced in Core Java concurrency, SQL databases (Oracle/PostgreSQL), AWS deployment, design patterns, and Agile Development, delivering high-quality, defect-free solutions.

Technical Skills

Core	Java 8, Spring Boot, Spring Security, Spring Data JPA, Microservices, REST APIs, Core Java (Concurrency)
Frontend	Angular 8+ (Angular 18), TypeScript, RxJS, JavaScript (ES6+), HTML5, CSS3, Bootstrap, React.js
Databases	Oracle, SQL, PostgreSQL, MongoDB, JPA/Hibernate, Query Optimization, Normalization
Cloud & DevOps	AWS, Openshift, Docker, Kubernetes, CI/CD, Git, Design Patterns, Agile/SDLC

Work Experience

Infosys Limited

Chennai, India

Systems Engineer

Sep 2021 – Dec 2023

- Worked on an AI-powered insurance document extraction platform, analyzing documents across **3** different lines of business and configuring extraction fields, classification rules, and carrier-specific document patterns.
- Developed Python and pandas-based post-processing logic to transform extracted JSON data, apply business rules/calculations, and generate client-ready Excel outputs, reducing manual data preparation effort by up to **80–90%**.
- Built and supported Apache NiFi automation pipelines integrated with extraction/classification APIs and Flask services running in Kubernetes to validate files, process documents end-to-end, and improve document-processing throughput by approximately **30%**.

Projects

NorthLedger — Personal Finance Backend *Java 8, Spring Boot, Spring Security, REST APIs, PostgreSQL, JPA*
[GitHub](#)

- Built a secure backend in Java 8 and Spring Boot with JWT login, refresh tokens, and role-based access, designing REST APIs (documented with OpenAPI/Swagger) for accounts, transactions, categories, and budgets on a normalized SQL schema using Spring Data JPA and design patterns.
- Built credit, debit, and transfer workflows with automatic balance updates, insufficient-funds checks, and concurrency-safe transaction handling, plus monthly dashboards driven by data aggregation across income, expenses, savings, and budget progress.

Mediaverse — Full-Stack Media Platform *Angular 18, TypeScript, Node.js/Express (SSR), RxJS, JWT, amCharts 5*
[GitHub](#)

- Architected a two-application platform (user media app and admin portal) on Angular 18 with standalone components, OnPush change detection, and server-side rendering (Angular Universal + Express), creating self-contained, reusable, and testable modules with a clear dependency chain.
- Designed a REST API over 9 related resources consumed by both apps; implemented JWT auth with bcrypt and route guards, a rule-based recommendation feature, automated content moderation, and an amCharts 5 analytics dashboard with full CRUD content and user/role administration.

TrendyTreasures — E-Commerce Microservices Platform *Node.js, Flask, React, MongoDB, JWT, Stripe, Docker*
[Live App](#) | [Admin Portal](#) | [GitHub](#) | [Auth Service](#)

- Built an e-commerce platform from seven independent microservices behind a Node.js API Gateway, designing the gateway to securely pass signed (RS256) JWT tokens between services and refresh them automatically; integrated Stripe checkout with server-side price checks and OpenAI-powered price suggestions.
- Developed a companion Auth Shield service — an OAuth-style login and API-credential service with RS256 signing, bcrypt-hashed secrets, instant token revocation, double-submit CSRF protection, and rate limiting, validated by a Jest + Supertest suite.

Education

Northeastern University

Toronto, ON

Master of Science in Information Systems — GPA: **3.9/4.0**

Jan 2024 – Dec 2025

QIS College of Engineering and Technology

India

Bachelor of Technology in Computer Science & Engineering

Jul 2017 – Jul 2021
